

NAME	Nguyễn Tiểu Phụng
ROLE	DevOps Engineer
AGE	27
ADDRESS	HCM City 0981172400 tieuphungiter@gmail.com

OVERVIEW

Statement and Achievements

Middle DevOps Engineer | 4+ Years Experience

Specialized in **AWS** automation, Jenkins CI/CD, and advanced observability. Proven expertise in performance engineering and infrastructure optimization to enhance deployment speed, reduce MTTR, and maximize cost-efficiency.

EDUCATION AND TRAINING

2017 – 2021	Information Technology engineering Tran Dai Nghia University
-------------	--

TECHNICAL SKILLS

Cloud Platform	AWS (EC2, ECS Fargate, S3, Lambda, CloudFormation, CloudWatch, API Gateway, Cognito)
DevOps Automation	Jenkins (Shared Libraries/Groovy, Python), Docker, Git
Observability	Prometheus, Grafana, SkyWalking, Glowroot, JProfiler
Operating Systems	Linux (CentOS/Ubuntu), Windows Server, Tomcat, WildFly
Databases	MS SQL Server, MongoDB, AWS DocumentDB.
Languages	Python, Shell Script, Groovy, SQL.
Generative AI	GitHub Copilot (AI-Assisted Coding), Claude, Gemini (LLMs), NotebookLM.

RECENT ASSIGNMENTS

Project	Performance Testing
Duration	12/2021 – Present
Company	DXC TECHNOLOGY Middle DevOps Engineer

Key Responsibilities

Performance Engineering	Configured performance environments and monitored key metrics during BM tests; collaborated with dev teams to analyze and resolve system bottlenecks.
-------------------------	---

Scripting Tooling	Developed custom tools and automation scripts using Python and Shell to streamline routine system administration tasks and improve operational efficiency.
CI/CD Automation	Designed and implemented CI/CD solutions using Jenkins (Groovy & Python) to automate deployment, system upgrades, and hotfixing processes, significantly reducing manual intervention/human error.
Infrastructure Management	Managed and operated Hybrid Cloud environments (integrating On-premises Linux and AWS), ensuring high availability and optimizing operational costs.
Monitoring Observability	Architected centralized monitoring and alerting systems using Glowroot, Prometheus, Grafana, and SkyWalking, enabling early detection of application and infrastructure issues and reducing Mean Time to Repair.
AI-Assisted Development	Utilizing GitHub Copilot and Claude to accelerate library development and refactor complex Groovy/Python scripts within DevOps pipelines.
Project	Intern (AI Engineer)
Duration	5/2021-11/2021
Company	Turbo Technology Solution Joint Stock Company Intern
Computer Vision Data Engineering	Conducted high-quality data annotation and preprocessing for object recognition tasks, ensuring dataset integrity for training deep learning models.
Model Serving Backend Development	Developed and integrated RESTful API modules using Flask to serve machine learning models, enabling seamless communication between AI cores and end-user applications.
Technology	Python, TensorFlow, Flask, Anaconda, Git, Linux.
