

Nguyễn Tiểu Phụng

DevOps Engineer · Cloud & CI/CD Specialist

Ho Chi Minh City, Vietnam · 098 117 2400 · tieuphungiter@gmail.com · DOB: 08/02/1999

PROFESSIONAL SUMMARY

Middle DevOps Engineer with 4+ years of experience designing and operating cloud-native infrastructure on AWS. Specialized in Jenkins CI/CD automation, hybrid cloud management (Linux + AWS), and advanced observability. Proven track record in performance engineering — reducing MTTR, eliminating manual toil, and ensuring high-availability deployments for enterprise systems. Skilled at building reusable DevOps tooling that scales across teams.

TECHNICAL SKILLS

CI/CD & Automation	Shared Libraries, Groovy, Python, Docker, Git, Shell Script
Cloud (AWS)	EC2, ECS, S3, Lambda, CloudFormation, CloudWatch, API Gateway
Observability	Prometheus, Grafana, SkyWalking, Glowroot, JProfiler — alerting & dashboarding
Infrastructure	Hybrid Cloud (on-premises Linux + AWS), CentOS/Ubuntu, Tomcat, WildFly
Performance Eng.	Benchmark test execution, load monitoring, bottleneck analysis, microservice tuning
Languages	Python · Groovy · Shell Script · SQL
Databases	MS SQL Server · MongoDB · AWS DocumentDB

PROFESSIONAL EXPERIENCE

DevOps Engineer · [DXC Technology](#) 12/2021 – Present

DevOps & Platform Engineering — Performance Testing Infrastructure

- Architected CI/CD pipelines (Jenkins/Groovy/Python) automating deployments, upgrades, and hotfixes — cutting manual effort by ~40% and significantly reducing human error across release cycles.
- Developed and maintained reusable Jenkins Shared Libraries and Python/Shell automation tooling, improving pipeline consistency and reducing onboarding time for new workstreams.
- Managed hybrid cloud environments (on-premises Linux + AWS) ensuring high availability, disaster recovery readiness, and operational cost optimization.
- Built centralized monitoring & alerting stack (Prometheus, Grafana, SkyWalking, Glowroot) enabling proactive anomaly detection and reducing Mean Time to Repair.
- Configured performance testing environments, executed benchmark test cases, and collaborated with dev teams to identify and resolve system bottlenecks under load.
- Leveraged GitHub Copilot and Claude to accelerate Jenkins Shared Library development and script refactoring — reducing DevOps scripting time by ~30%.

AI Engineer Intern · [Turbo Technology Solution JSC](#) 05/2021 – 11/2021

- Built end-to-end ML pipeline for a computer vision object recognition system — from data annotation and preprocessing to model serving via RESTful API (TensorFlow + Flask).

EDUCATION

B.Eng. Information Technology · [Tran Dai Nghia University](#) 2017 – 2021

LANGUAGES

Vietnamese — Native English — Fluent (professional working proficiency)
